Key Insights

Most respondents reported becoming a data professional was **moderately difficult**.

Data Scientists earn the **highest average salary** (~\$94K).

Python is by far the most popular programming language across all job titles.

Salary satisfaction is **lower** than work/life balance satisfaction, indicating room for improvement.

Student/Looking/None respondents report the **lowest** average salaries.

All values are averages or counts based on survey responses.

Key Insights

The United States reported the **highest** overall average salary (~\$79K) among surveyed region.

Data Scientists earned the **highest** average salary overall at approximately \$139K.

Salary satisfaction (~5.0) and work/life balance satisfaction (~6.38) were **both above** the global averages

Python remained the dominant programming language across nearly all data-related professions.

Students reported the **lowest** salaries (~\$33K), highlighting a large compensation gap between early and senior technical roles.

All values are averages or counts based on survey responses.

5.84

Key Insights

The United Kingdom reported a **lower** overall average salary (~\$46K) compared to the United States and Canada.

“Other” reported the **highest** average salaries (~\$61K), outperforming Data Scientists within this regional sample.

Salary satisfaction (~4.05) **remained below** work/life balance satisfaction (~5.84), continuing the broader survey trend.

Respondents most commonly described becoming a data professional as **moderately difficult**.

Python remained the most widely used programming language across job roles in the region.

All values are averages or counts based on survey responses.
